- General Internist

Biography

Dr. Pham is Vice President of Provider Alignment Solutions at Anthem Inc., where she is responsible for developing and refining Anthem's provider payment models, which reduce the cost of care while rewarding improvements in quality and access. She oversees a portfolio of more than 30 value-based care initiatives, including Enhanced Personal Health Care, an accountable care program that focuses on patient-centered care and reimburses doctors for value-based, rather than volume-based, performance.

Additionally, Dr. Pham is focused on developing new products and networks built on a foundation of value-based care.

Prior to joining Anthem in 2017, Dr. Pham was a founding official at the Center for Medicare & Medicaid Innovation (CMMI), where she served as Chief Innovation Officer and was responsible for implementing the alternative payment model provisions of the Medicare Access and CHIP Reauthorization Act (MACRA) and other multiorganizational initiatives for CMMI. Dr. Pham's earlier work at CMMI included serving as Director of the Seamless Care Models Groups, overseeing the design and testing of models on accountable care organizations and advanced primary care, including the Pioneer and Next Generation ACO Models and Comprehensive Primary Care Initiative. Previously, she was Senior Health Researcher and Co-Director of Research at the Center for Studying Health System Change and Mathematica, an independent health policy organization.

A general internist, Dr. Pham has published extensively on payment and care delivery issues, including care fragmentation and coordination, and also practiced at safety net clinics in the Washington, DC, area. Dr. Pham received her undergraduate degree from Harvard University, her M.D. from Temple University, and her M.P.H. from Johns Hopkins, where she was also a Robert Wood Johnson Clinical Scholar.
